DETAILED ACTION

Response to Amendment

The examiner acknowledges the addition of claims 20-22.

Response to Arguments

Applicant's arguments, see Remarks, filed 12/08/2005, with respect to claims 1-19 have been fully considered and are persuasive. The rejection of claims 1-19 has been withdrawn.

Specifically the examiner agrees with the applicant that the noted deficiencies of Kuniyasu, namely the independent metal and solder areas, exist and do not correctly read on the claimed subject matter. In addition, the examiner agrees that it would not have been obvious to split the diode bar of Craig into multiple chips as this would be thought to complicate alignment methods with the optics.

Allowable Subject Matter

Claims 1-22 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claims 1, and 16-19, each are quite specific as to the arrangement and material properties of the laser array. Namely the heat dissipation block, submount, laser material, type of fiber, lens system, mounting method, and solder used. Ozawa (US 6479325) was found to teach the heat block, submount, laser material and mounting technique, but was only directed to single emitters and not array structures. Lang et al. (US 6240116) was found to teach heat blocks with submounts mounted thereon, but taught the use of laser bars (like Craig) and did not motivate the use of the

plural rather than an individual submount structure. It was found to be non-obvious to combine these teachings as proper motivation did not exist.

Claims 2-15, and 20-22 are allowable as they depend from allowable claims 1, and 16-19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ozawa (US 6479325), and Lang et al. (US 6240116), are believed pertinent for the reasons stated above.
